DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. The application has been amended as follows:
 - a. Substitute the abstract filed on 08/03/2004 with the following:
 - - A light source device includes: a light-emitting tube including a light-emitting portion; a reflector including a neck portion provided with an insertion hole to which the light-emitting tube is inserted, and a reflecting portion integrally formed with the neck portion and having an ellipsoidal curved reflecting surface. The light-emitting tube has a sub-reflection mirror that covers substantially front half of the light-emitting portion. The reflector has a step formed between the peripheral edge of an opening end of the insertion hole near the reflecting surface. The external diameter of the step is larger than the external diameter of the sub-reflection mirror while the external diameter of the step is within the internal diameter of a valid reflection area of the reflector, the internal diameter being defined by a focal position on the front side of the reflector and the outer periphery of the sub-reflection mirror. - -

Allowable Subject Matter

3. Claims 1-4 are allowed.
4. The following is an examiner's statement of reasons for allowance:
 - a. Regarding claim 1, the prior art of record neither shows nor suggests a light source device comprising a reflector having a step formed between the peripheral edge of an opening end of the insertion hole near the reflecting surface and the reflecting surface, wherein the external diameter of the step is larger than the external diameter of the sub-reflection mirror while the external diameter of the step is within internal the diameter of a valid reflection area of the reflector, and wherein the step has a part where the reflecting surface is not deposited on the border with the valid reflection area.
 - b. Regarding claim 3, the prior art of record neither shows nor suggests a projector comprising a light source device having a reflector wherein a step is formed between the peripheral edge of an opening end of the insertion hole near the reflecting surface and the reflecting surface, wherein the external diameter of the step is larger than the external diameter of the sub-reflection mirror while the external diameter of the step is within internal the diameter of a valid reflection area of the reflector, and wherein the step has a part where the reflecting surface is not deposited on the border with the valid reflection area.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Johanson (US 2004/0032739 A1) discloses an illumination device having a first parabolic reflector and a second parabolic reflector.
